**DEHUMIDIFY**

Silica gel is used to dehumidify enclosures.

**AVOID**

Avoid high pollutant concentrations.

**FILTER**

Filter the air exchange rate.

**PASSIVE**

Ensure a filter can be placed within an enclosure. If necessary, exchange is required.

**ACTIVE**

Active systems are available, though for example flash an enclosure with an inert gas. This method requires expert advice and should only be carried out with very high value objects, due to the high expense.
